A 61-year-old female after initial exploratory laparotomy with partial tumor resection was admitted to Maria Skłodowska-Curie Institute-Oncology Cancer Center for clinical and pathological consultation. The tumor mass of the 10 cm diameter was located in the iliac fossa region and was attached to large vessels. The intraperitoneal dissemination and lymph node metastases were found. Histopathological and immunohistochemical findings are depicted in Figure 1: A – HE (40×), B – HE (100×), C – HE (40×), D – HE (600×), E – HMB-45 (200×), F – Cathepsin K (200×), G – PAX8 (200×), H – progesteron receptor (200×), I – TFE3 (200×).

**Quiz**

**WHAT IS YOUR DIAGNOSIS?**
Answers should be sent to the Editorial Office until 31.12.2019. The correct answer will be announced in the next issue of the *Polish Journal of Pathology*.
